

Our office is now offering COVID 19 Rapid Antigen testing for the convenience of our patients. Your results should be available within 30 minutes.

Testing will be provided by appointment only. The test can be performed for someone with symptoms or someone with COVID 19 positive exposure.

Rapid Antigen test is to quickly identify a person who are COVID 19 positive. We will be able to advise on isolation and treatment once results are reviewed.

If your COVID 19 Rapid Antigen results are negative and you continue to have symptoms, after 48 hours the more specific COVID 19 PCR should be done to confirm your negative test.
